

T	Key	Summary	Story point estimate	P	Risk	Parent	Description	Sprint	Status
	COV-144	The navbar shows a placeholder name instead of the logged in users name	1		Low	 <a href="#">Authentication and Authorization</a>	<p>Currently when a user logs in the navbar will show a placeholder first and last name. This should show the logged in users first and last name.</p> <p>After the sign in and sign up requests start returning the users name in the payload and saving it in the redux store we can update the navbar to fetch this data from the store and display it.</p>	COV Sprint 2	<a href="#">TO DO</a>
	COV-145	The drop down inputs in the sign in form are pre-selected when they should not have a default value	1		Low	 <a href="#">Authentication and Authorization</a>	<p>Currently the sign in form has some drop down input for selecting the gender and province. These drop downs have pre-selected values so that no validation needs to take place.</p> <p>This should be fixed so that there is no value as default and be required to have a user input the selection.</p>	COV Sprint 2	<a href="#">TO DO</a>
